

CASE STUDY

Goodwood MetalCraft Limited has been producing food grade stainless steel bowls for a leading domestic and commercial food processor manufacturer since the mid 1970's. Initially spinning mixing bowls, fittings and accessories, we now manufacture refrigerant ice cream bowls for the same company.

The two piece construction uses a special aluminium sheet from which the internal bowl is pressed, clear anodised and then specially coated on the outside.

Once formed and trimmed, the internal bowl is assembled to the outer plastic bowl by rolling the top edge to create a seal. Before assembly, a refrigerant liquid is added to the outer bowl to create the

unique properties required for making ice cream.

Once complete, the bowls are packed and exported to China, bucking the trend for such goods to travel in the other direction and showing that British manufacturing still has a place in the challenging world market.

Goodwood MetalCraft produces many thousands of other similar products for a variety of leading international companies of consumer goods.
